Earthen PLUS CLADDING

Earthen Plus Cladding is manufactured from premium quality, clear New Zealand Radiata Pine. Through thermal modification, Earthen Plus gains a natural durability and increased stability for exposed areas of your house and in harsh climates and conditions. Class 2 Durability ensures longevity of the cladding.

The exfoliated surface of the cladding allows Foreverbreathe Oil coatings to infuse deeply into the timber to help with performance and reduce maintenance costs.

Earthen Plus pairs perfectly with the Earthen Castellated Battens* to create a ventilated wall cavity. This cavity assists in preventing moisture and condensation inside your external walls.
